

3 WR back-to-back - SAME rank, diff-BG (PHY delays shown)

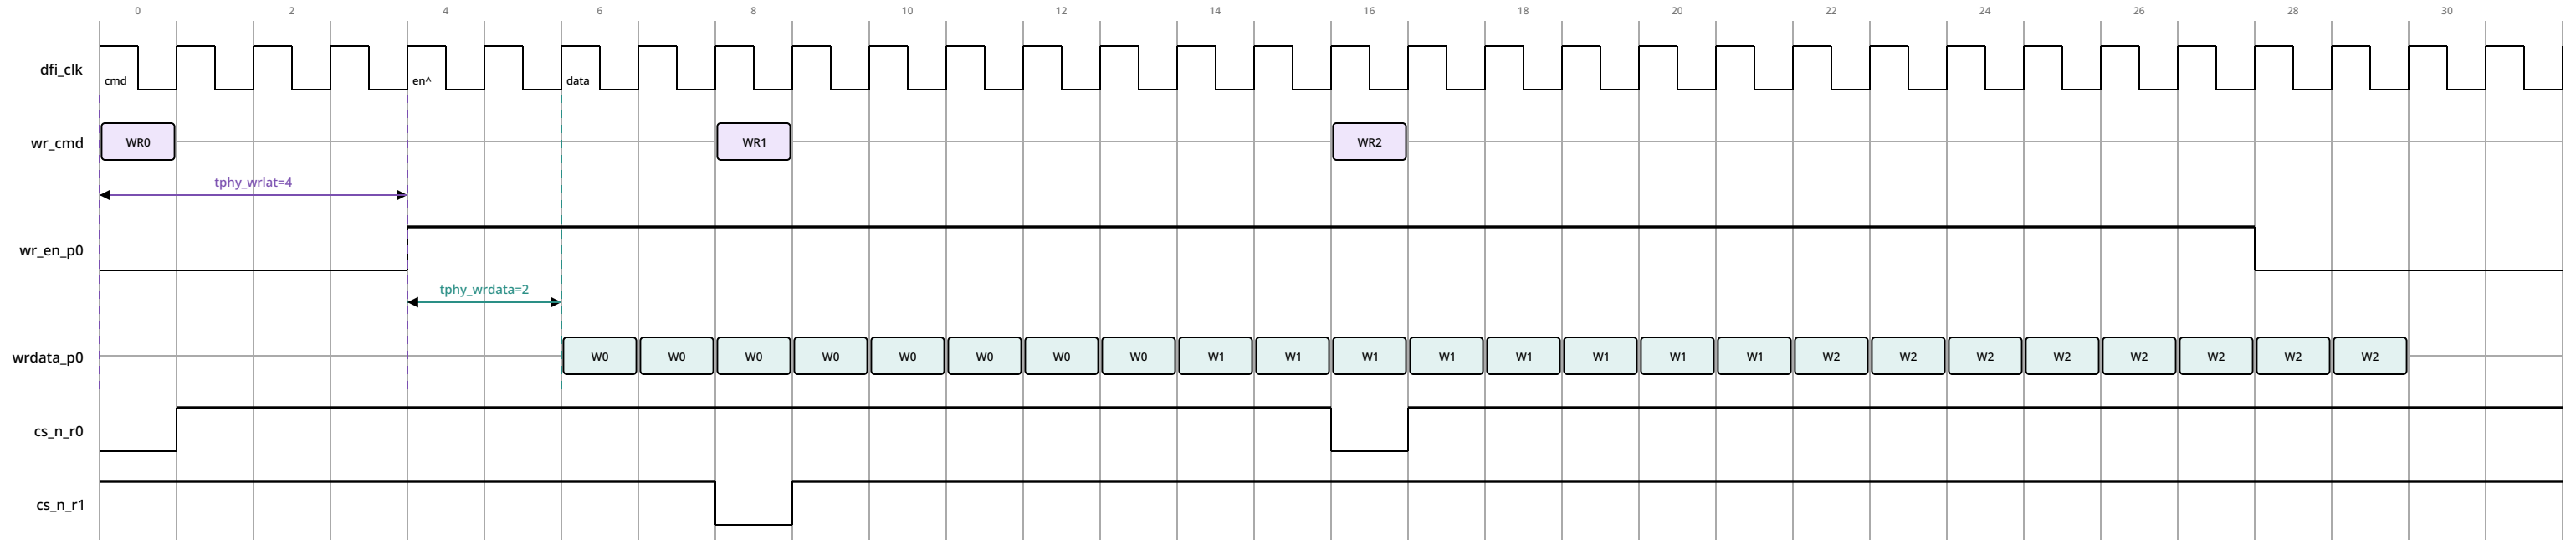

WR0/1/2 @ 0/8/16 rank0; cmd +tphy_wrlat -> en, +tphy_wrdata -> data

WR1/WR2 repeat the SAME two hops from their own cmd (8 apart). spacing 8 = burst 8 -> en + data both continuous; en leads data by wrdata=2.

3 WR back-to-back - CROSS rank (r0,r1,r0) (PHY delays shown)

WR0(r0)@0, WR1(r1)@8, WR2(r0)@16; SAME tphy all ranks -> identical hops + tiling

WR1/WR2 repeat the SAME two hops from their own cmd (8 apart). spacing 8 = burst 8 -> en + data both continuous; en leads data by wrdata=2.
